Event d	New State: State D Action 5	New State: State D Action 3 Action 5		

Fig. 4

Element	Description
<BPSE>	Global element for the business process state engine repository
<ObjectTypes>	Definition of object types
<ObjectType xid=string>	Unique Ref ID of the object type (system generated)
<Name>string</Name>	Name of the object type
<Description>string</Description>	Description of the object type
</ObjectType>	
<ObjectType xid=string>	
…	
</ObjectTypes>	
<Diagrams>	Definition of state diagrams
<Diagram xid=string>	Unique Ref ID of the diagram (system generated)
<Name>string</Name>	Name of the diagram
<Description>string</Description>	Description of the diagram
<ObjectTypeRef xid=string>	Ref of the object type on which the diagram applies
</Diagram>	
<Diagram xid=string>	
…	
</Diagrams>	
<States>	
<State xid=string>	Unique Ref ID of the state (system generated)
<Name>string</Name>	Name of the state
<Description>string</Description>	Description of the state
<DiagramRef xid=string>	Ref to the diagram to which the state belongs
</State>	
<State xid=string>	
…	
</States>	
<Events>	
<Event xid=string>	Unique Ref ID of the event (system generated)
<Name>string</Name>	Name of the event
<Description>string</Description>	Description of the event
<ObjectTypeRef xid=string>	Object type on which event is applicable
</Event>	
<Event xid=string>	
…	
</Events>	

Fig. 5a

<Actions>	
<Action xid=string>	Unique Ref ID of the action (system generated)
<Name>string</Name>	Name of the action
<Description>string</Description>	Description of the action
<ObjectTypeRef xid=string>	Object types on which action is applicable (optional)
</Action>	
<Action xid=string>	
...	
</Actions>	
<TimedActions>	
<TimedAction xid=string>	Unique Ref ID of the timed action (system generated)
<Name>string</Name>	Name of the timedaction
<Description>string</Description>	Description of the timed action
<ObjectTypeRef xid=string>	Object types on which timed action is applicable (optional)
<TimeOut>string</TimeOut>	Time when action(s) will fire (dd hh:mm)
<Actions>	Action(s) that will fire when timeout expires
<Action xid=string />	Ref to the action to be fired
...	
</Actions>	
</TimedAction>	
<TimedAction xid=string>	
...	
</TimedActions>	
<Transitions>	
<Transition xid=string>	
<TriggeringEvent xid=string />	Ref to the event that triggers the transition
<Diagram xid=string />	Ref to the state digram to which the transition belongs
<Source xid=string />	Ref to the source state of the transition
<Target xid=string />	Ref to the target state of the transition
<Actions>	Ref to the actions to be taken when transition occurs
<Action xid=string />	
...	
</Actions>	
<TimedActions>	Ref to timed actions to be scheduled
<TimedAction xid=string>	
...	
</TimedActions>	
</Transitions>	
</BPSE>	

Fig. 5b

Element	Description
<EventMessage>	Global element for the event message
<Header>	Event header information
<Origin>string</Origin>	Origin (system that generated the message on the bus)
<MessageDateTime>string</MessageDateTime>	When the message was sent (DD-MM-YYY HH:MM:SS)
<EventType>string</EventType>	What type of event
<EventDateTime>string</SendDateTime>	When the orginal event was created (DD-MM-YYY HH:MM:SS)
<Location>string</Location>	Where the event was created
<User>string</User>	Who created the event
<Reason>string</Reason>	Why the event was created
<Method>string</Method>	How the event was created
<ObjectType>string</ObjectType>	Object type on which the event applies
<ObjectID>string</ObjectID>	Object ID on which the event applied
</Header>	
<Object>	Specific Object data associated with the event - format specific to the object type
<ObjectData1>….<ObjectData1>	Object specific data
…	
<ObjectDataN>….<ObjectDataN>	Object specific data
</Object>	
</EventMessage>	

Fig. 5c

Element	Description
<ActionMessage>	Global element for the action message
<Header>	Action header information
<Origin>string</Origin>	Origin (system that generated the message on the bus)
<MessageDateTime>string</MessageDateTime>	When the message was sent (DD-MM-YYY HH:MM:SS)
<ActionType>string</ActionType>	What type of action
<Reason>string</Reason>	Why the action was triggered
<ObjectType>string</ObjectType>	Object type on which the action applies
<ObjectID>string</ObjectID>	Object ID on which the action applies
</Header>	
<Object>	Specific Object data associated with the event - format specific to the object type
<ObjectData1>….<ObjectData1>	Object specific data
… ,	
<ObjectDataN>….<ObjectDataN>	Object specific data
</Object>	
</ActionMessage>

Subscribe to State Engine Event messages
20
Save the event in the Event History table
21
For all State Diagram Definitions relating to the object type of the embodied object
22
Instantiate new Running State Diagram for embodied object with current state None
25
Is there a state diagram running for the embodied object?
23
No
Yes
Is there a Transition with source state None with the Event as Triggering event?
24
Yes
No
Is there a Transition associated with the Event for the currentstate of the running State Diagram?
26
No
Yes
If Target State is different than the Current State, update Current State with Target State, cancel open Timed Actions and save the Current State in the State History table
27
Find and execute associated Action(s) and Save action(s) in Action History table
28
Find associated Timed Action(s) and intiate timer(s) Save Timed Action(s) in Timed Action History Table
